The Manufacturing Engineering Department will provide a quality engineering education to prepare students for the practice of engineering. A strong laboratory component in the curriculum, with opportunities for industrial internships and research experiences will provide engineering skills that enhance the understanding of the applications of engineering sciences and the realization of the importance of lifelong learning. A strong emphasis on verbal and written communications will be stressed.

STUDENT LEARNING OUTCOMES:
1. Able to use knowledge of mathematics, basic sciences and engineering to analyze problems in electrical/mechanical/manufacturing engineering.
2. Able to design and conduct experiments and interpret the results.
3. Able to design electrical/mechanical/manufacturing devices, systems or processes that meet given specifications.
4. Able to use computers and software for analysis, design and documentation.
5. Able to communicate ideas effectively in graphical, oral and in written media.
6. Able to function as a team member to solve engineering problems.
7. Understands the professional responsibility of an engineer and how engineering solutions impact safety, economics, ethics, politics, society and cultural issues.
8. Understands the need for life long learning to keep abreast of current engineering practice.
9. Able to function in multi-disciplinary teams.
