Computational science graduates develop emphasis in two major fields, one in computer science and one in another field, in order to integrate an interdisciplinary computing degree applied to a number of emerging areas of study such as biomedical-informatics, digital forensics, computational chemistry, and computational physics, to mention a few examples. Graduates of this program are prepared to enter the workforce or to continue a graduate studies either in computer science or in the second major.

STUDENT LEARNING OUTCOMES:
1. Knowledge: Be well prepared for a professional career or graduate studies in computer science applied to a second major field of study.
2. Application: Be able to apply computer science principles to real-world problems in a second field of study.
3. Organizational: Have the skills to work effectively within an organization.
4. Ethical: Understand ethical, professional and social issues related to the practice of their profession.
