Title of the Project:

“Impact of Positive Reinforcement Intervention for K-12 Students on Anxiety Associated with Science, Technology, Engineering and Math (STEM) Subjects & Test Taking”

Project details:

This study aims to measure anxiety and provide positive reinforcement towards (STEM subjects) science, technology, engineering, and math anxiety and test-taking anxiety, low-self-esteem, and stress.

The study covers children in K-12 classes.

The participants of the study will be school children recruited from Edinburg Independent School District.

Children will be provided positive reinforcement while they are working in afterschool/tutoring session.

Expected Research Outcomes:

This research is intended to help children with positive reinforcement helps in learning and the test-taking process. The children and schools will benefit by seeing how positive reinforcement might impact learning and test-taking.

Children will receive help to overcome test anxiety & improve the test scores.
