

HOW TO SETUP OR CHANGE RECEIVER CHANNEL

The default channel is 41 in a receiver. You can use the following steps to change the channel.

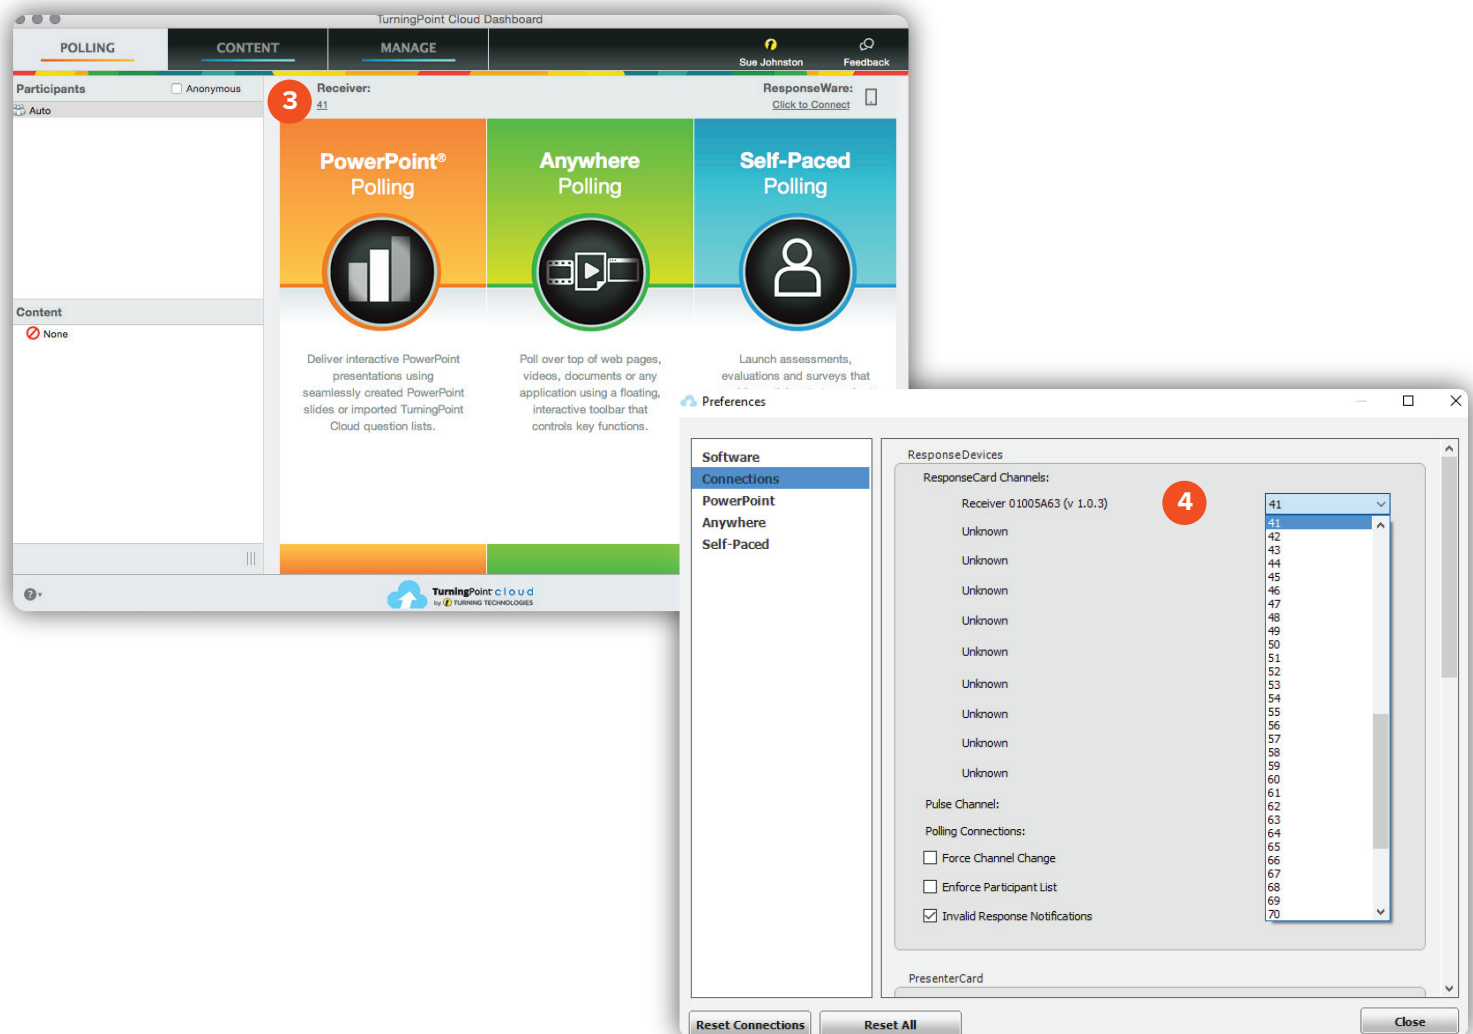

1. Plug the receiver into your computer.

Note: In TP Cloud software, if you have an older receiver (Gray – RFFF 02) you will need to have this replaced. You can email coltthelp@utrgv.edu to get a new receiver. If you have a current receiver (White – RFFF 03 or 04) and plug in your receiver, you will receive a pop-up that says **Caution**. The specific message will give you instructions on how to update your receiver. Once the upgrade is complete, your receiver will only operate with **TurningPoint Cloud**. Most computer podiums in classrooms have a current receiver installed.

2. Open **Turning Point Cloud** software.

3. Clicking on the **receiver channel** number.

4. A window will open where you can select a new channel number then click **Close**. Once the channel number is set you will not need to reset it again.
