UTRGV physicists help observe gravitational waves

BY STEVE CLARK

Mark VCCKean was floored when he got the news in mid-September that the Laser Interferometer Gravitational-wave Observatory (LIGO) in Livingston, Louisiana, had detected gravitational waves just a few days earlier.

"Like, wow," he said.

The other victims listed in the lawsuit are Leslie Enriquez Redelfs, an employee of the U.S. Consulate Office in Ciudad Juarez, and her husband, Arthur Redelfs, a detention officer.

Educational accountability discussed in Brownsville

BY GARY LONG

There was little disagreement among educators at a meeting Thursday in Brownsville about the need for public school student assessments and accountability measures.

The meeting was one of nine "community conversations" being held across the state by the Next Generation Commission on Assessments and Accountability. The meetings are part of the rollout of House Bill 204, the measure that requires Texas accountability system to move to an A to F rating system beginning with first- and second-grade tests.
WASHINGTON. On Sept. 14, both House Speaker Paul Ryan and Senate Majority Leader Mitch McConnell confirmed that Washington, D.C., will be a part of the 2020 census in an effort to disincentivize illegal immigration. Despite this, the Census Bureau and other government agencies continue to urge states to participate in the census.

The census is a count of every person living in the United States. The last census, conducted in 2010, was the first to include a question about citizenship status. The accuracy of the census is crucial for allocating federal funds to states, which are based on the census data. The data collected in the census is used to determine how many representatives each state has in Congress, as well as how many federal dollars each state receives annually.

The census is also important for businesses, as it provides valuable information about the population of each state. This information is used to help businesses make decisions about where to locate their facilities, as well as to help them understand the needs and preferences of the population.

In addition, the census is used to determine how much money each state receives from the federal government. The data collected in the census is used to allocate federal funds to states, which are based on the census data. The data collected in the census is used to determine how much money each state receives from the federal government.

The census is also important for researchers, as it provides valuable information about the population of each state. This information is used to help researchers understand the needs and preferences of the population, as well as to help them make decisions about how to allocate federal dollars to the states.

Finally, the census is also important for the Census Bureau, as it provides valuable information about the population of each state. This information is used to help the Census Bureau understand the needs and preferences of the population, as well as to help them make decisions about how to allocate federal dollars to the states.

In conclusion, the census is a crucial component of the federal government’s efforts to allocate federal dollars to states, as well as to help businesses understand the needs and preferences of the population. The census is also important for researchers, as it provides valuable information about the population of each state. This information is used to help researchers understand the needs and preferences of the population, as well as to help them make decisions about how to allocate federal dollars to the states.
