

## Dae Joon Kim, Ph.D.

Associate Professor  
Department of Immunology and Microbiology  
Institute for Cancer Immunotherapy  
School of Medicine

### Contact Information

University of Texas Rio Grande Valley  
Office: Room 1.410, 5300 North L Street,  
McAllen, TX. 78504  
Phone: +1 (956) 665-6411  
Email: [dae.kim@utrgv.edu](mailto:dae.kim@utrgv.edu)

### Education & Training

**Ph.D. in Molecular Toxicology**, The Pennsylvania State University, PA

**Postdoctoral Fellow/Instructor**, The University of Texas M.D. Anderson Cancer Center, TX

**Research Associate**, The University of Texas at Austin, TX

### Research Focus

The primary focus of research in my laboratory is to identify roles played by protein tyrosine phosphatases (PTPs) in environmental skin carcinogenesis. Our recent studies revealed that TC-PTP, an intracellular and nonreceptor PTP, plays a critical role in a protective mechanism against skin carcinogenesis. We generated both epidermal-specific TC-PTP knockout (*K14Cre.Ptpn2<sup>fl/fl</sup>*; TC-PTP KO) and TC-PTP-overexpressing (*K5HA.Ptpn2*) transgenic mice as *in vivo* models from which we also generated immortalized mouse primary keratinocyte cell lines. Using these tools, we will investigate how TC-PTP contributes to prevention of skin cancer development during each stage of skin carcinogenesis. The findings will contribute substantial new information towards understanding how skin cancer arises, and this can then be used in developing more effective anti-skin cancer therapeutics. The secondary focus of research in my laboratory is to investigate molecular mechanisms of chemoresistance in osteosarcoma, based on our recent discovery that

the glial cell derived neurotrophic factor receptor alpha 1 (GFRA1) is a major player in the development of cisplatin resistance in osteosarcoma.
