

### **Access to My SSP Outside of US or Canada**

Stay connected! Students can connect with a My SSP Counselor via chat and call function while traveling outside of US and Canada.

To use chat, you must have access to your provider network (data access) or a Wi-Fi connection.

1. The chat function through the free My SSP app works as it would if you were accessing from within Canada or the US. If you are experiencing difficulties, check your internet connectivity. Please also note that certain functions of My SSP may not be available due to connectivity, firewall or access limitations in your region. If this is the case, please consider calling My SSP instead.

The following are 2 options for making a call to My SSP outside of the US or Canada:

1. Make an international call using your phone service provider network. International calling charges can be applied in one of two ways:
  - a. Student calls directly from My SSP app or direct **(001.416.380.6579)**. To call internationally, you must have international calling enabled on your phone. International calling charges apply.
  - b. You may opt to “**call collect**” to have the charges reversed back to My SSP. To do this, you must find the collect call service for the country in which you are located, dial the number, and request to make a collect call to **001.416.380.6579**. My SSP will accept the charges and you will be connected to a My SSP Counselor.
    - i. Please be aware that when using the call collect option, the My SSP autoattendant messaging is by passed and you will be connected directly with a representative. Please explain that you are a student looking to access the My SSP services from outside Canada/US.
2. Call via Wi-Fi connection\*. To call via Wi-Fi, certain conditions must be met:
  - a. You must be using a Wi-Fi-calling capable phone
    - i. Wi-Fi calling must be turned on.
  - b. Your service provider supports Wi-Fi calling
  - c. Troubleshooting: If you are unable to make or receive Wi-Fi calls, it may be due to one of the following reasons:
    - i. Device does not support Wi-Fi calling.
    - ii. Device does not have the latest system update available
    - iii. Service plan does not include Wi-Fi calling
    - iv. Emergency address for Wi-Fi calling not set up (service providers in certain countries are required by federal regulatory agencies to support calls to emergency services and collect a registered location to enable the service)

- v. The Wi-Fi calling setting is turned off in device settings
- vi. Wi-Fi calling is blocked on user's phone line
- vii. No Wi-Fi network connection

For more information about Wi-Fi calling including links to major US and Canadian carrier policies go to:

United States:

[Everything you need to know about Wi-Fi calling](#)

Canada:

[What is Wi-Fi calling?](#)

*\*NOTE: making calls over Wi-Fi can still come out of your regular minutes allowance and be charged as an international call depending on your phone plan. Be sure to read the policies of your carrier to see if there are any potential restrictions and charges related to your situation*
